FOR THE “I DO”

THE INSIDER'S GUIDE TO INJECTABLES AND FILLERS

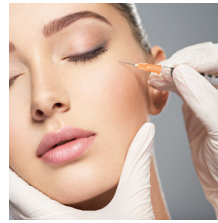

EVERYTHING YOU NEED TO KNOW BEFORE YOUR INJECTABLE TREATMENTS

The world of injectables and fillers is vast, and with so many different options to choose from, it can seem overwhelming.

In the simplest terms, Injectable treatments are hyaluronic acids and neurotoxins. Hyaluronic acids are fillers administered depending on the area of concern. Typically, thicker fillers are utilized to lift, while finer fillers are used to fill in finer lines. With over 40 different fillers, it is important to trust your provider's assessment of your specific needs.

Today's menu offers a wide array of products to address not only wrinkles, but also the muscles that cause lines to form. Neurotoxins work by blocking the nerve receptors on muscles to smooth out wrinkles. While they do not provide the same type of plumping effect as fillers, neurotoxins can also be used for facial contouring. The product is strategically injected into the appropriate areas, and within 1-7 days, you will start to notice reduced movement in the treated areas.

NEUROTOXINS

These injectables temporarily block nerve receptors on your muscles, which soften the look of lines and wrinkles caused by repetitive movements. They can also be used to prevent lines and wrinkles from forming, extending your youthful look for longer.

HYALURONIC ACID FILLERS

These fillers literally "fill in" the space between your skin's collagen and elastin fibers, removing your creases by enhancing plumpness.

CALCIUM-BASED AND POLY-L-LACTIC ACID FILLERS

Also known as "collagen stimulating fillers", these give an immediate filling effect but also continue to work over time. Formulated in a gel or water base, they can stimulate the body's own production of collagen, which provides a longer-lasting effect.

The best injectables for you will depend on your skin type and personal goals. What works for your friend may not work for you.

NEUROTOXINS

Neurotoxins such as Botox, Dysport, Xeomin, and Daxxify, smooth out the lines that form from repetitive facial movements such as smiling, frowning, and squinting. They can also be used on the brows, the forehead, chin, tip of the nose, the corners of the mouth, bunny lines, and above the eyebrows to lift a saggy brow line to give a fresher look.

It only takes
a few tiny
injections for
you to see
noticeable
improvement
within days.

Neurotoxins work by blocking the nerve receptors on muscles to smooth out wrinkles. While they do not provide the same type of plumping effect as fillers, neurotoxins can also be used for facial contouring. The product is strategically injected into the appropriate areas, and within 1-7 days, you will start to notice reduced movement in the treated areas.

WHAT YOU CAN EXPECT

You may be red or bruised at the injection site for a few days. Results can be seen in one to seven days, but may take up to 2 weeks to see full effects. The results typically last, on average, three to four months. Once treatment is discontinued, frown lines, crow's feet, and forehead lines will gradually return. However, after repeated regular injections, for some patients, results may last longer. Areas of swelling go away after 15-30 minutes, and will typically take a few days-two weeks to fully see results.

WHAT YOU NEED TO KNOW

PROCEDURE TIME About 15 minutes, depending on how many areas are being treated

TREATMENT AREAS A saggy brow line, crow's feet, frown lines, forehead wrinkles and lines, between the eyebrows (glabella), neck (platysmal bands)

RECOVERY A few hours to a few days

HOW LONG THEY LAST On average, 3-4 months and depending on the patient, may last longer.

OTHER USES Treating excessive perspiration (Hyperhidrosis), reducing gummy smile; eliminating neck bands and cleavage wrinkles, creating a botox-induced neck lift; creating wider-looking eyes; treating migraines and TMJ; trapezius muscles for tension in the neck/shoulders; and reducing pore size and skin quality improvement.

FAQs

WHO SHOULD CONSIDER INJECTABLES AND FILLERS?

The best candidates are men and women who are physically healthy, psychologically stable, and have realistic expectations. A typical neurotoxin patient may once have been over the age of 30 but more men and women are deciding to have this procedure at a younger age in order to prevent premature wrinkles from appearing. Botox can be used early for rejuvenation and preventing potential wrinkles to form starting as soon as early 20's.

WHAT CAN BE COMBINED FOR MORE INTENSIVE RESULTS FROM INJECTABLE TREATMENTS?

Those suffering from severe signs of aging, like extreme skin laxity. In these cases a skin tightening treatment such as Ultherapy or a laser such as UltraClear or Genius RF may be recommended.

ARE THERE ANY MEDICATIONS THAT SHOULD BE AVOIDED BEFORE TREATMENT?

Avoid vitamin E, St. John's Wort, ibuprofen, aspirin, and other anti-inflammatory medications for 10 days to two weeks before your injections. This will reduce the potential for bleeding, swelling, and bruising.

TIPS TO
MAXIMIZE
YOUR
RESULTS

HYALURONIC ACID FILLERS

Our natural levels of hyaluronic acid decline with age due to exposure to free radicals and the aging process in general. With the ability to hold up to 1,000 times its own weight in water, HA (a sugar found naturally in human skin) is responsible for retaining moisture in the skin. It binds to water similarly to the way a sponge absorbs water. Because of this, it hydrates skin in the treated area and fills the space between collagen and elastin fibers, enhancing skin's plumpness.

Each hyaluronic acid filler has a different molecular size, or density, which allows the injector to choose the right product for various applications, like the lips, cheek, temples, fine lines, etc.

These agents also have the ability to promote collagen and elastin when injected into the skin, and are generally reversible. If a problem develops, it can usually be corrected by removing the filler with an injection of hyaluronidase. Hyaluronic acid fillers are used to fill in and plump up wrinkles and folds on the face and can also add to features that look flat or sunken in, especially on the cheeks, lips, tear troughs/hollows, temples, and jawline. They are often injected into the nasolabial folds, upper forehead, brow creases, and chin. Suspended in a gel formula, hyaluronic acid fillers work from the inside to attract water and plump up the deficient area.

Dermal fillers are available in different consistencies, allowing providers to select the most appropriate option based on the treatment area and desired outcome. Some formulations are designed to restore volume and structure, while others are better suited for smoothing fine lines and enhancing more delicate areas such as the lips. Depending on the formulation, fillers may be placed at varying depths to achieve natural-looking results.

WHAT YOU CAN EXPECT

With most HA fillers, a topical anesthetic will be applied to the treatment areas at least 15 minutes before administering the injectable. Most formulas are now made with lidocaine to immediately numb the area, giving you a faster and more pleasant experience. You may experience temporary bruising, swelling and lumpiness.

WHAT YOU NEED TO KNOW

TREATMENT AREAS

Nasolabial folds, wrinkles, volume loss in cheeks, chin, and jawline, thin lips, and under eye hollows

PROCEDURE TIME

Varies depending upon the areas being treated but typically 30 minutes- one hour.

RECOVERY

Initial swelling subsides within 24-48 hours. Bruising can last 7-10 days.

HOW LONG THEY LAST

3-12 months, depending on area

OTHER USES

Correcting contour, adding volume, reducing acne scars, plumping earlobes, filling lines, enhancing and volumizing lips, fixing hollow cheeks

FAQs

CAN NEUROTOXINS AND FILLERS BE INJECTED DURING THE SAME TREATMENT?

Absolutely. Our expert team of providers can use a specific combination of injectables to personalize your treatment, commonly known as the "Liquid Lift." Neurotoxins can relax frown lines and hyaluronic acids can lift the creases left behind. Studies have shown that the results of hyaluronic acid fillers may last longer when used in tandem with a neurotoxin.

WHEN IS THE BEST TIME TO START USING INJECTABLES TO PRESERVE A YOUTHFUL LOOK?

The answer is different for everyone. Some patients feel that early intervention is advantageous. It enables periodic smoothing of fine lines before they become deep lines and wrinkles. Other patients choose to start with neurotoxin injections (such as Botox) as soon as any trace of lasting fine lines appear between the eyebrows or around the eyes. For age related concerns, patients may start in their 30's. For image related concerns, such as lip enhancements, or facial volume loss from weight loss or a GLP-1, patients often start as early as their 20's.

RESET. REFRESH. RENEW.

EVERYTHING YOU NEED TO KNOW ABOUT WHAT'S NEW IN REGENERATIVE AESTHETIC DERMATOLOGY.

LET'S TALK ABOUT PEPTIDES, EXOSOMES, MICRONUTRIENTS AND PURE PDGF+

ENHANCED MICRONEEDLING

Microneedling opens temporary pathways that dramatically enhance the absorption and effectiveness of targeted topical therapies. At our practice, we elevate results by pairing microneedling with science-backed formulations including:

When these advanced combination therapies are combined with microneedling, they help to resolve and restore:

- Fine lines and wrinkles
- Skin laxity
- Uneven skin texture and tone
- Skin dullness and lack of radiance
- Delicate skin areas, e.g. the eyes
- Hair loss

These combination therapies are safe for all ages, and for patients looking for rejuvenation, to enhance laser treatments, looking red carpet ready with low downtime, and restoring overall skin and hair health.

- Most patients report visible improvement in skin quality, and laxity
- 78% noticed smoother, firmer skin around the eyes within 90 days

MICRONUTRIENTS AND BIOMIMETIC PEPTIDES

For skin rejuvenation and hair restoration.

EXOSOMES

Repair and renew your recovery and help the scalp and skin by boosting natural repair.

PDGF+, PRP, PRF (Platelet-Derived Growth Factors) for accelerated tissue regeneration and collagen stimulation.

HYALURONIC ACID-RICH COMPLEXES

For hydration and structural support.

FAQs

What can I expect before and during a Microneedling treatment?

Our providers will usually apply a topical numbing cream 30 minutes prior to treatment, then perform microneedling which can take up to 30 minutes. This is usually followed by the application of topical micronutrients and peptides, Exosomes, pure PDGF+, PRP, and PRF.

How many treatments will I need for my face?

For combining Microneedling with topical micronutrients and peptides, Exosomes, or PDGF+, we recommend a minimum of 4 treatments. When combining topicals with laser treatments, we recommend starting your treatment 2 weeks prior to "prep and prime" the best outcome for the skin and two weeks post laser.

How many treatments will I need for my hair?

For treating hair loss and regrowth, we recommend a series of 5-10 treatments depending on the severity of your hair loss, combined with PDGF+, Exosomes, and Micronutrients and Peptides depending on what your provider suggests.

MICRONUTRIENT + PEPTIDE COCKTAILS FOR ALL YOUR SKIN AND HAIR CARE NEEDS

Together, these ingredients support healing, hydration, and long-term rejuvenation—helping your skin rebuild itself naturally.

ANTI-AGING COCKTAIL

Deeply hydrates and revitalizes fine lines and wrinkles and improving the appearance of skin laxity.

ANTI-OXIDANT COCKTAIL

Get your skin ready for the new year ahead. Protects and strengthens the skin against pollution, UV exposure, and environmental stress—ideal for those who spend time outdoors or play sports.

PURIFYING COCKTAIL

Perfect for oily, acne-prone, or rosacea-prone skin. Balances oil production, calms inflammation, and refines pores.

RADIANT SKIN COCKTAIL

Targets hyperpigmentation, sun damage, and uneven tone for brighter, more luminous skin.

NUTRITIVE COCKTAIL

This cocktail delivers a comprehensive boost to the skin's structure and resilience, helps reduce dullness, minimize inflammation, and strengthen the skin's natural defenses against environmental stressors and UV damage. This cocktail is frequently used for "prep and prime" for before laser treatments for optimized results.

EYE COCKTAIL

Restores hydration and brightness to tired eyes to reduce puffiness, fine lines, and dark circles.

HAIR COCKTAIL

A revitalizing blend that strengthens hair follicles, improves scalp health, and promotes thicker, fuller hair.

BEST FOR:

- Male and female alopecia or general hair loss
- Postpartum hair loss
- Revitalizing hair follicles
- Hydrating and nourishing the scalp
- Improving hair thickness and density

REJUVENATION COCKTAIL

Restores radiance, hydration, and smoothness while minimizing enlarged pores and signs of aging. Known for its synergistic effects, we often combine this cocktail with our laser treatments, and recommend a minimum series of 4 treatments.

SALMON DNA/ PDRN

A powerful regenerative treatment popular among celebrities and patients alike. Sodium DNA, derived from purified salmon DNA, promotes collagen and hyaluronic acid production, combats oxidative stress, and strengthens the skin's structure.

BEST FOR:

- Skin laxity, deep tissue looseness
- Anti-aging- localized fine wrinkles
- Dry, opaque skin
- Enhanced repair and reduced downtime
- Glass Skin glow effect

THE RED CARPET COCKTAIL

A perfectly curated blend made to rejuvenate, brighten, hydrate and refresh your skin for the perfect glow.

THE PERFECT COMBINATION

Every treatment at Supriya Dermatology is customized to your skin's needs. Whether you want to address aging, acne, dullness, or hair loss, we'll design a plan to help your skin restore its natural glow—from the inside out.

YOU'LL NOTICE:

- Improved skin tone and texture
- Increased firmness and elasticity
- Enhanced hydration and radiance
- Reduced fine lines and pores

FOR ENHANCED REJUVENATION

For enhanced rejuvenation, pair microneedling and micronutrient treatments with:

- PRP or Pure PDGF+
- Laser skin resurfacing
- Botox (neurotoxins), Hyaluronic Acid Fillers, Collagen Biostimulators (Sculptra)
- Exosomes

PURE PDGF+

Pure PDGF+ by Ariessence is a topical skin rejuvenation solution that delivers pharmaceutical-grade platelet-derived growth factor (PDGF) without the need for a blood draw. Unlike PRP or PRF—which rely on the patient’s own platelets—Pure PDGF+ is a synthetic, consistently potent formulation applied topically during microneedling. This allows patients to receive powerful regenerative benefits without variability from hydration, sleep, diet, or other overall health factors.

Because it is synthetically engineered using advanced recombinant technology, pure PDGF+ provides consistent potency, up to 300,000x more concentrated than other platelet derived treatments.

Pure PDGF+ supports cellular repair, enhances follicular health, improves microcirculation, and promotes thicker, healthier hair growth. Its high potency makes it an excellent alternative for patients who prefer not to use their own plasma. PDGF is one of the most well-studied growth factors in regenerative medicine, backed by numerous peer-reviewed publications and clinical trials.

WHAT AREAS CAN BE TREATED?
HOW MANY SESSIONS WILL I NEED?

TREATMENT AREAS

- Facial rejuvenation during microneedling
- Hair restoration alongside microneedling or regenerative therapies like PRP/PRF

Pure PDGF+ delivers a reliable dose of growth factor with every treatment, helping create predictable and consistent skin rejuvenation results. Most patients benefit from a series of 3–6 treatments spaced one month apart, often in combination with microneedling or laser procedures.

CAN PURE PDGF+ BE COMBINED WITH SCULPTRA?

Yes. Pure PDGF+ pairs exceptionally well with Sculptra. While Sculptra stimulates deep collagen production over time through injections, Pure PDGF+ supports surface-level regeneration and additional collagen signaling. When used together—either at the same appointment or spaced appropriately—they enhance skin firmness, texture, and long-term rejuvenation.

EXOSOMES

Exosomes are powerful, naturally occurring messengers released by stem cells that promote communication and repair between skin cells. Containing growth factors, peptides, and signaling molecules, they support your skin’s and scalp’s natural ability to restore balance, hydration, and vitality.

HOW TOPICAL EXOSOME THERAPY WORKS

When applied after procedures such as microneedling, laser resurfacing, or RF treatments, exosomes deliver regenerative bio-signals that awaken and nourish the skin and scalp.

THEY HELP:

- Soothe and calm irritation following in-office treatments
- Support collagen and elastin production for firmer, smoother skin
- Improve hydration and barrier repair
- Enhance microcirculation for improved scalp and hair health
- Encourage faster post-procedure recovery

Essentially, exosomes help the skin and scalp behave more youthfully by boosting their natural repair and renewal processes.

BENEFITS OF TOPICAL EXOSOME THERAPY

Patients notice visible improvements in the appearance and texture of their skin and scalp. Common benefits include:

- Reduced redness and downtime and enhance treatment results after lasers or microneedling
- Brighter, more even skin tone
- Improved scalp environment for healthier hair
- Restored hydration and glow
- Long-term support for overall rejuvenation

WHAT TO EXPECT

Exosomes are typically applied immediately after procedures like microneedling, RF, or laser treatments to maximize absorption and recovery. The serum is gently massaged into the skin or scalp, where it delivers concentrated regenerative benefits.

WHO IS A GOOD CANDIDATE?

Exosome therapy is ideal for anyone looking to:

- Boost recovery after laser or microneedling treatments
- Restore luminosity and hydration
- Improve the appearance of fine lines, uneven tone, or dullness
- Support healthier scalp and hair growth conditions

It’s a gentle, non-invasive way to enhance results and accelerate healing after professional aesthetic procedures.

FAT LOSS TREATMENTS

TIRZEPETIDE

Tirzepatide is one of the most advanced medical weight-loss injectables available today. It works by mimicking two naturally occurring hormones—GLP-1 and GIP—that help control appetite, stabilize blood sugar, and improve how your body burns fat.

Because it activates both of these pathways, Tirzepatide can boost metabolic efficiency, enhance fat loss, and help you feel fuller for longer.

HOW IT CAN HELP

- Boost metabolic efficiency
- Enhance fat loss
- Feel fuller longer
- Can reduce cholesterol
- improved scalp and hair health
- Can improve blood pressure

This once-weekly injectable is FDA-approved for weight management, and clinical studies show it can:

- Support up to 22% total body weight loss in the first year.

It's a powerful option for anyone looking for a science-backed, effective way to reach their weight-loss goals.

HOW IS TIRZEPETIDE ADMINISTERED?

Tirzepatide weight loss injections are designed for self-administration guided by a healthcare provider. These medications are typically delivered through subcutaneous injections (injections under the skin) once weekly. The medication can be safely and painlessly injected in the lower abdomen, thighs, or upper arms.

WHAT YOU NEED TO KNOW

Weight loss often comes with unintended muscle loss — which can affect strength, metabolism, and overall body shape.

EMSCULPT

Emsculpt® and Emsculpt NEO® help address this by rebuilding and redefining muscle while also improving body contours.

Emsculpt uses HIFEM® energy to trigger intense muscle contractions that enhance tone and definition.

Emsculpt NEO combines HIFEM with radiofrequency heating to build muscle and reduce fat simultaneously. Clinical studies show:

- One 30-minute session is the equivalent of up to 35,000 sit-ups or squats
- Up to 25% more muscle, 30% less subcutaneous fat
- 14% less visceral fat, delivering powerful, comprehensive results.

TREATMENT AREAS

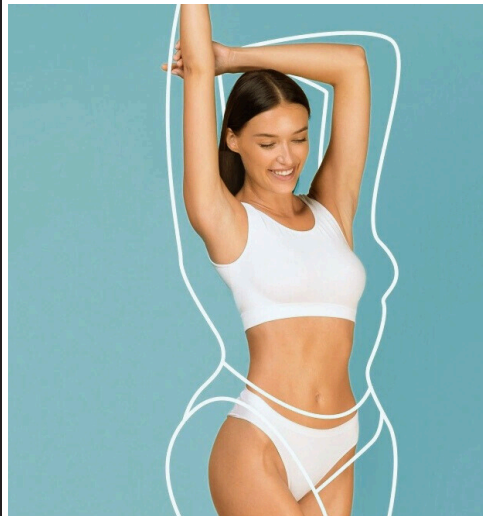

Abdomen, buttocks, arms, thighs, calves

SESSION TIME

30 minutes

HOW MANY SESSIONS WILL I NEED?

For optimal results, we typically recommend a series of at least 4 treatments spaced 3-10 days apart. Depending on the level of improvement desired, some patients benefit from additional sessions.

KYBELLA

Whether you're looking to achieve a sharper jawline, or get rid of a double chin without the need for liposuction or a neck lift, Kybella™ provides a non-surgical solution that aligns perfectly with our philosophy of enhancing your natural beauty.

HOW DOES KYBELLA WORK?

Kybella™ is an injectable treatment that permanently reduces submental fat by using deoxycholic acid, a naturally occurring molecule in the body that breaks down fat cells beneath the chin—think of it as an injectable enzyme that catalyzes fat breakdown. Treatments are performed in-office in about 20–30 minutes using precise markings and multiple small injections, with numbing options available for comfort. Temporary swelling, bruising, or tenderness may occur and typically resolves within days to weeks.

WHAT AREAS CAN BE TREATED WITH KYBELLA?

Kybella™'s ability to target specific areas of localized fat makes it a versatile option for individuals looking to refine their body contours without the need for invasive surgery. This innovative treatment allows for precise and customizable fat reduction, providing a non-surgical alternative to traditional liposuction. Whether you have stubborn fat under the chin, around the bra line, on the back, or in other challenging areas, it can help sculpt and contour your body to achieve a more streamlined and defined appearance. Some of the specific areas that can be effectively treated with Kybella™ include:

Kybella is FDA approved for submental fat (double chin/ area under chin)

It can also be used off-label to treat other areas:

- Flanks (Love Handles)
- Upper Arms
- Inner Thighs
- Bra Fat
- Back Fat
- Knees

FAT RESTORATION

WHAT IS “OZEMPIC FACE”?

“Ozempic face” is excessive skin laxity and sagging as a result of dramatic weight loss. Realistically, anytime you lose a significant amount of weight, whether it’s with Ozempic or otherwise, there’s a chance you’ll notice a lot of excess skin. The fat pads in your face (and anywhere else on your body) go a long way towards making your skin plumper and smooth. So when you lose part of that structure that supports a little extra lift in your face, sagging is expected.

RENUVA

Renuva® is an innovative, non-surgical treatment that restores lost facial and body volume by stimulating your body to regenerate its own fat. Rather than adding synthetic filler, Renuva uses an adipose (fat) matrix that serves as a natural scaffold, encouraging new fat cells to grow in the treated area for soft, lasting rejuvenation.

HOW DOES RENUVA WORK?

Renuva® is an injectable that helps your body naturally restore lost volume. It contains the same supportive components found in your own fat, guiding your body to rebuild healthy fat cells over 3–6 months. As new cells and blood vessels form, the area gradually becomes fuller, smoother, and more youthful — with results that look and feel completely natural.

WHAT AREAS CAN BE TREATED WITH RENUVA?

Renuva is an injectable treatment that replenishes lost volume by restoring the body’s own natural fat. It is commonly used to address age-related volume loss in areas such as the face, neck, décolletage, and hands, as well as other parts of the body where subtle contour enhancement is desired. Renuva can also improve the appearance of cellulite dimples, smooth out irregularities from liposuction, and soften the look of depressed scars.

WHAT MAKES RENUVA UNIQUE?

Renuva® is unique among injectables because it regenerates fat, restoring the soft, natural fullness lost with aging. It’s especially effective for the face and neck, helping to smooth hollow areas and crepey skin. With medical weight loss and natural aging, many men and women experience volume loss — Renuva gently replaces it for a naturally youthful look.

CAN RENUVA BE COMBINED WITH INJECTABLES AND HA FILLERS?

Renuva® restores natural fat-based volume lost with aging, making it ideal for the face and neck. It pairs well with neurotoxins like Botox® to soften wrinkles, and with hyaluronic acid (HA) fillers for precise contouring and lift. While Renuva rebuilds long-term, natural fullness, HA fillers provide immediate shaping, and neurotoxins smooth fine lines — together creating a balanced, youthful result.

Unrivaled results. Ageless beauty.

SUPRIYA
AESTHETIC DERMATOLOGY

BRIDE GUIDE SPECIALS

We're here to have you feel your most natural beautiful self before your special day. Whether you are a part of the bridal party, mother of the bride, or the bride herself, we can't wait to be there for you through every step!

\$100 OFF TREATMENT OF BOTOX OR FILLER

Book your appointment to start your picture perfect look and receive an \$100 discount

\$150 OFF FIRST EMSCULPT TREATMENT

Our unique Experience the power of 35,000 sit-ups or squats while you take a 30-minute break away from your hectic planning schedule.

WITH ANY RX FOR TIRZEPETIDE, RECEIVE 20% OFF EMSCULPT SERIES

Lose weight and maintain your muscle with our Emsculpt series of 4 treatments at 20% off on abdomen, buttocks, calves, or thighs.

(VALUE \$800)

ANY SERIES OF 4 MICRONEEDLING, PEPTIDE, AND MICRONUTRIENT PACKAGE, RECEIVE 5th TREATMENT FREE

Our unique fortified skin and hair cocktails are here to help you look and feel your best.

(VALUE \$800)

HYDRAFACIAL SPECIAL

Get wedding-ready skin with our treatment designed to deeply cleanse, hydrate, and instantly boost radiance for your big day. Perfect for brides, grooms, and the entire wedding party, this no-downtime treatment delivers a smooth, luminous complexion just in time to say “I do.”

(SAVE \$100)

SERIES OF 4 LASERS (FRAXEL, BBL, ULTRACLEAR, GENIUS RF) RECEIVE 5th LASER MAINTENANCE TREATMENT AND FREE MICRONEEDLING + PEPTIDES TREATMENT

Receive a free microneedling, peptide and micronutrients cocktail treatment specialized to your skin's needs.

(VALUE OVER \$1500)

SERIES OF 10 MICRONEEDLING HAIR COCKTAIL SESSIONS, SAVE \$2000

For treating hair loss and regrowth, we recommend a series of 5-10 treatments depending on the severity of your hair loss with micronutrients and peptides Hair Cocktail.

Recommended to also combine with PDGF+, Exosomes, and Micronutrients and Peptides depending on what your provider suggests.

(VALUE \$2000)

SERIES OF 4 RENUVA INJECTIONS: FREE MICRONEEDLING + PEPTIDES PREP + PRIME AND FREE EXOSOME TREATMENT

Discover the unique cocktail to prime your skin rejuvenation and collagen restoration with a customized microneedling prep and prime cocktail. Enhance your skin's healing and elastin production for firmer, smoother skin with your Renuva treatment.

(VALUE \$1200)

NON SURGICAL BBL

Purchase 20 vials of Sculptra for a non-surgical BBL to lift, shape and glow without surgery and receive a free series of 5 Emsculpt sessions to enhance results and build muscle

(VALUE \$5000)

MICRONEEDLING + ELLACOR LASER + EXOSOMES

Book one Ellacor laser treatment and receive one free prep + prime microneedling, micronutrient and peptide session and one Exosome post-laser treatment

- Prep with Microneedling & Micronutrients – Primes the skin and boosts nutrient absorption.
- Ellacor Laser – Smooths wrinkles and improves texture by stimulating collagen.
- Post-Treatment Exosomes – Speeds healing and enhances regeneration for longer-lasting, radiant results.

(VALUE \$1200)

NON-SURGICAL FACE LIFT COMBINATION: ULTHERA + ULTRACLEAR

Lift, tighten and transform your face without any surgery required. By combining Ultherapy and the UltraClear lasers, you combine collagen stimulating ultrasound technology and maximum tightening laser resurfacing.

With this package combination you will receive 3 microneedling and peptide cocktail treatments, and one exosome treatment to enhance and optimize healing and maximum results.

(SAVE \$2800)

THE ADVANCED SKIN TIGHTENING DUO: GENIUS RF + ELLACOR

Reveal smoother, firmer, more refined skin with our most powerful skin-tightening pairing. Genius RF boosts collagen from within, while Ellacor precisely removes micro-columns of lax, aged skin for dramatic tightening and texture improvement.

(SAVE \$2000)

THE GLOW AND GO: PACKAGE OF 4 CLEAR AND BRILLIANT; RECEIVE LIGHT CHEMICAL PEEL

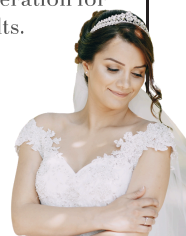

Achieve radiant, refreshed skin with little to no downtime. Clear + Brilliant gently resurfaces to brighten tone, refine pores, and boost overall glow perfect for busy schedules or year-round maintenance. With a series of four treatments, results build beautifully over time. Your package also includes a light chemical peel to enhance exfoliation and maximize your glow for smoother, more luminous skin.

(VALUE \$1000)

BRIDAL BOTOX PARTY

Specially hosted Bridal Botox Parties will receive a free lip filler for the bride, as well as one free lip flip for all who participate in the custom hosted event with our expert providers

(VALUE +\$1000)
